## Experiencia

Auronix

12 años 4 meses

Head of DevOps

septiembre de 2019 - Present (2 años 8 meses)

Auronix has 26 years in the LatAm market offering a Conversational Platform as a Service (CPaaS) helping 1000+ clients to send 3B+ messages annually.

As Head of DevOps my job is to streamline the Software Development Process to help our engineering teams deliver faster and more secure products to our clients.

I was in charge of designing and implementing our new infrastructure, migrating from monolithic services, to a cutting edge distributed and auto scalable infrastructure capable of serving hundreds of millions of messages.

I lead a team of talented engineers that manage hundreds of services and dozens of pipelines.

We managed to switch from manually configuring servers, to an automated code defined infrastructure increasing our change velocity from days to minutes.

Tech Lead

julio de 2015 - septiembre de 2019 (4 años 3 meses)

As a Tech lead I started the transformation of our entire Engineering team, paving the way to adopt proven methodologies resulting in a more agile and stable development process.

I had to wear many hats:

I was an architect deciding the best tool for the problem at hand, and a Product Owner managing the backlog and working with stakeholders and clients defining the tasks, also a Coder, getting my hands dirty solving hard technical problems, and as a Mentor making sure all the developers under me could thrive.

### Senior Fullstack Developer

enero de 2010 - julio de 2015 (5 años 7 meses)

I'd say this was the period I learned the most, as a part of a three man team that built a couple of profitable products. I was able to learn how to build and scale Software as a Service in the cloud.

We created an atmosphere that allowed us to fail fast and iterate rapidly. This mindset helped me create a culture that values innovation and delivers great products to our clients.

### IBM

#### Developer

enero de 2008 - diciembre de 2009 (2 años)

Desarrollando un sistema de Punto de Venta para las tiendas Extra de Grupo Modelo

### Auronix

#### Developer

agosto de 2004 - diciembre de 2007 (3 años 5 meses)

proyectos de telefonía, IVRs, reconocimiento de voz etc
